I am a Bachelor of Informatics Engineering student at Brawijaya University with a great interest in mobile application development. I have experience in using Kotlin and Android Studio to build Android-based applications, such as 'Hope', an application designed to support trauma recovery for survivors of violence. In addition, I have skills in object-oriented programming, database management, and interface design using Figma. With a combination of technical skills and organizational experience that has honed project management and communication skills, I am ready to contribute as a mobile developer in innovative and impactful projects.

## Education Level

---

### Universitas Brawijaya
